LIQUIDITY FUNDING

ROADMAP

Community-facing roadmap • BNB Smart Chain • Version 1.0 • September 2026

1. Our Liquidity Vision

AXPAX aims to develop its market liquidity progressively as the community grows and real trading activity develops. Rather than committing the entire available token reserve at once, liquidity development is planned in transparent stages.

Phase 1 funding target: €2,500

This is the initial community funding objective for strengthening AXPAX liquidity. Reaching this target does not represent a promise of a particular token price, trading volume or return.

Community Liquidity Reserve

A community allocation of 70,000,000 AXPA is reserved for the continued development of the AXPAX ecosystem, including potential future liquidity requirements. These tokens are not automatically committed to the liquidity pool.

2. What the Funding Supports

Community funding is intended to support the continued development of AXPAX liquidity. Relevant liquidity activity and project information will be communicated transparently, with on-chain transactions available for verification.

3. Funding Phases

PHASE 1 — INITIAL LIQUIDITY

TARGET: €2,500

Building the foundation

The first funding objective is focused on strengthening the initial AXPAX/BNB liquidity base while keeping the project transparent and the community allocation responsibly managed.

PHASE 2 — GROWTH LIQUIDITY

TARGET: €5,000

Activated after evaluation

If community participation and genuine trading activity develop, AXPAX may introduce a second funding objective. Phase 2 is not automatically activated simply because Phase 1 is reached.

PHASE 3 — EXPANSION

TARGET: TO BE DETERMINED

Scaling with real demand

Future liquidity objectives will be established according to the development of the AXPAX ecosystem, actual market activity and the project's liquidity requirements.

4. A Transparent Progression

Each phase is intended to be evaluated on its own merits. Funding targets may be adjusted or future phases may be delayed if actual conditions do not justify additional liquidity at that time.

5. Transparency

AXPAX intends to communicate liquidity development in a clear and verifiable manner. Where appropriate, the project will publish funding progress, liquidity-related transactions and information concerning the community reserve.

AREA	TRANSPARENCY PRINCIPLE
Funding	Community funding progress can be communicated publicly.
Liquidity	Relevant liquidity additions can be verified through on-chain transactions.
Community reserve	The 70,000,000 AXPA community allocation is retained progressively and is not automatically placed into the pool.
Future phases	New targets are evaluated according to actual development rather than guaranteed timelines.

6. Important Funding Notice

Contributions do not provide ownership in AXPAX, do not guarantee a return and do not entitle contributors to tokens or other financial compensation.

Contributions are voluntary and are intended to support the development of AXPAX liquidity.

Funding does not constitute a promise of profit, a guaranteed token price or guaranteed future liquidity. Cryptocurrency markets are volatile and liquidity provision carries market risk.

The AXPAX token supply is fixed at 100,000,000 AXPA. The community allocation is 70,000,000 AXPA and the liquidity allocation is 10,000,000 AXPA. These allocations describe intended destinations and do not mean that all tokens are immediately circulating.

This roadmap is a separate project document and complements the AXPAX White Paper.
